

Abstract of the disclosure

The invention relates to a method for changing an orientation of a User Interface (UI), the method comprises the steps of detecting a course of motion that
5 is performed on the UI, and changing the orientation of the UI with respect to a device in which the UI is integrated according to the detected course of motion. The course of motion that is performed on the UI may for instance be the dragging of an element across a touch-
10 screen display or the drawing of a gesture on a touch-screen display. The invention further relates to a device, a mobile phone, a computer program and a computer program product.
